

PROJECT MANAGEMENT

While many companies are learning that providing real-time, wireless mobile access to corporate networks can greatly improve their productivity, efficiency, and personnel availability, few companies have implemented wireless technologies. This is primarily because of the perception that wireless is expensive, complex, and cost-prohibitive.

Intermec's Project Management can address those concerns by managing each step of your wireless implementation process.

Strategic Planning

The first and most important step is the creation of a strategic plan that clearly identifies your operational goals. Too often, companies focus solely on technology, overlooking the business issues it is expected to solve. This approach can result in an infrastructure driven by price and ease of acquisition, but not adequately designed to support desired functions without costly upgrades and/or retrofitting.

To optimize the benefits from wireless technologies, Project Management defines the functional requirements for implementing wireless devices. This includes why they are needed, how they will be used, and how they will impact your business processes. Only after the business case has been defined, will Project Management design the best implementation plan to improve processes, increase productivity, and maximize profitability.

Choosing the right project management vendor is just as important as selecting the appropriate hardware and software. The best technology is of little value if the company is overwhelmed by a wireless system that was poorly planned and implemented. Determining whether a provider can deliver on time and within a specific budget is a key consideration.

Benefits

Because of the relationships Intermec has forged with many leading wireless system providers, we can provide "one stop shopping" with the expertise, convenience, and assurance you need. In addition, with Project Management you get:

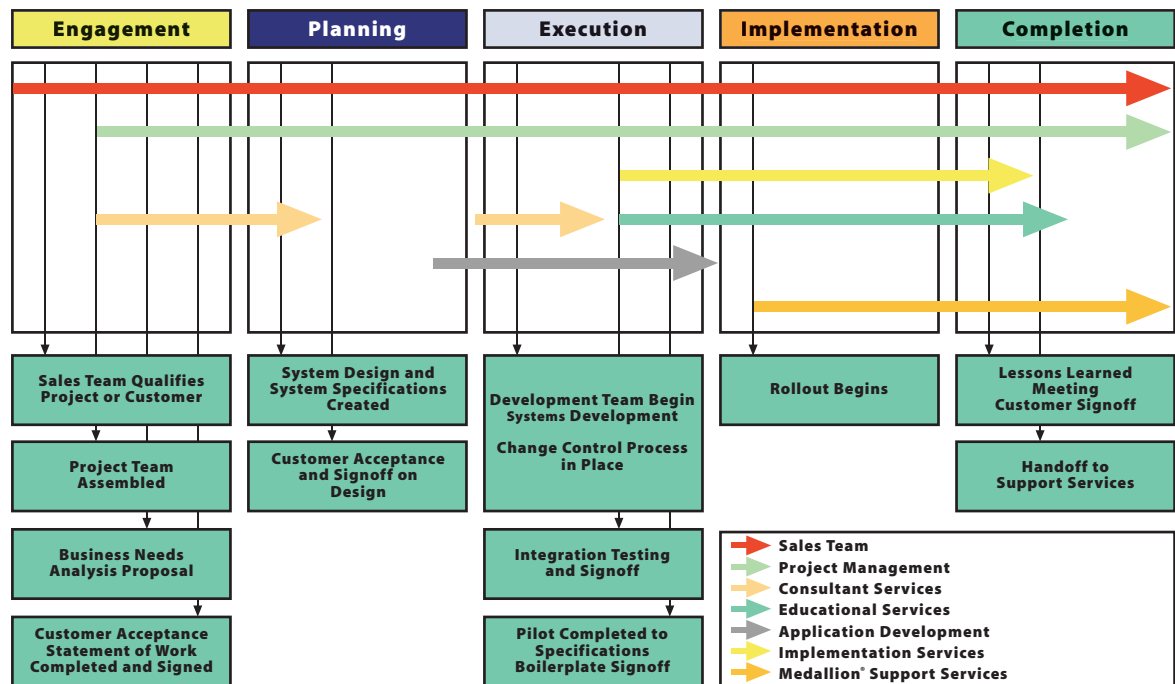

- o A single point of contact for all project communications
- o Project planning, including defining the scope of work, preparing a statement of work, developing project objectives, developing schedules, identifying acceptance procedures, and documenting a project plan
- o Project implementation, including proper site preparation; tracking, site evaluation surveys, and installation schedules; coordination of the activities of all resources involved in the implementation; project status reports; and implementing project controls
- o Oversight and management of the overall installation process, including managing communications, tracking equipment shipment, managing change request, and identifying problems and their resolution
- o Project completion and closeout to your requirements and expectations

Intermec Global Services understands the issues and challenges associated with mobile and wireless environments. Our customer-focused professionals will work with you to integrate new wireless solutions with your existing systems and applications to ensure optimum performance over the short and long terms. You can assess a variety of wireless solutions and networking applications that can be tailored to your precise business needs.
