

## **SITE ENGINEERING SERVICES**

Intermec's nationwide team of site engineering professionals is ready to design and manage the implementation of a complete, real-time wireless network infrastructure for your company. Our innovative expertise maximizes your company's return on its technology investment to deliver increased productivity and bottom line performance.

Our site engineering experts provide a comprehensive set of services that includes:

### **Site Survey**

This on-site service determines the optimal number, placement, and configuration of wireless access point to provide the required RF coverage in the desired areas of your facility. Specifications are developed for the required network layout, cabling, bridges, routers, and hubs.

### **Installation Planning and Supervision**

Intermec's Professional Services team can install the system designed for you during the site survey. This includes pre/post installation walkthroughs, contractor technical assistance, and acceptance testing. Intermec analysts are available for go-live support during production implementation and technical training for your support staff.

### **Special Services**

Often in today's highly technical network environment, additional assistance may be required to address complex implementation and integration issues. Intermec's systems analysts have advanced qualifications in one or more of the following:

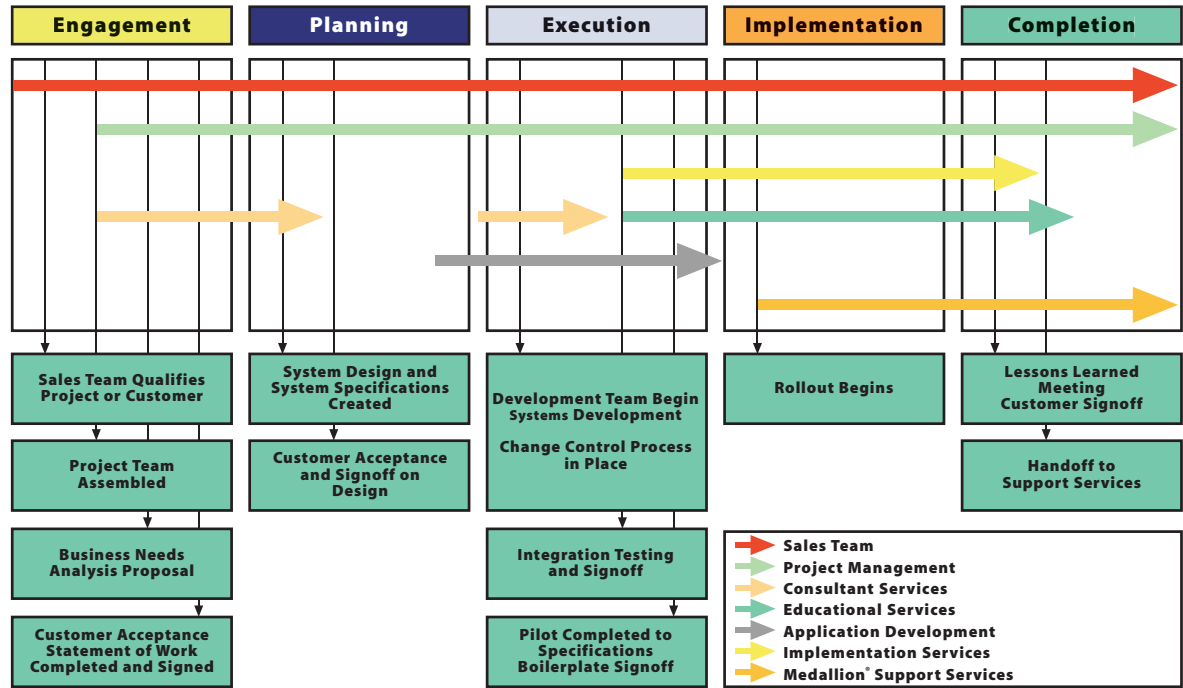

- o Spectrum analysis
- o BMI power analysis
- o Network load analysis
- o Site certification and coverage verification
- o Problem diagnosis, technical troubleshooting, and problem resolution
- o On-site training in RF network maintenance

Intermec's site engineering professionals are committed to providing virtually any support—even beyond the services listed above—to meet all your technical requirements during the system design and implementation process.
